DETAILED ACTION

Claim Rejections - 35 USC § 101

Claim 19 is rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a specific asserted utility or a well established utility.

the programs instructions stored in recording medium of the claim is not executed by a computer processor. Further, the specification does not disclose a computer processor that executes the program instructions (see specification, page 7).

Claim 19 is also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

Note, the claim preamble indicates an apparatus, but the claim body indicates a process. Therefore, the claim comprises an apparatus followed by a process. It is not clear whether the claim is an apparatus claim or a method claim.

Claim 20 is also rejected because it depend on claim 19.

Allowable Subject Matter

Claims 1-18 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

In claims 1 and 11, the prior art does not disclose determining means for determining whether the separated recording control information constitutes a value matching any one of values in a first value group; replacing means for replacing said recording control information with any one value from said first value group depending on the value constituted by said

separated recording control information; and controlling means which, if said determining means determines that said recording control information separated by said separating means constitutes a second value different from any one of the values in said first value group, then causes said generating means to supplement said content data separated by said separating means with that one of the values in said first value group which is used by said replacing means to replace said second value constituted by said recording control information.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
